

Rafał Kozłowski

Project manager, intent to become a software engineer.

From some time I am preparing for career path change into software engineering. I believe that my engineering education, solid project management and customer relations experience will help me to develop new set of skills quickly and make profound impact on the quality of my work.

What excites me the most in coding? How fast and simply you can transform the word into visual, dynamic objects. How you can create something out of nothing. How programs, websites and apps makes life easier for people all over the world.

Solving problems and finding new ways to deliver solution gives me a feeling of development, fulfillment and personal growth. That is why I am determined to become the part of IT world.
